

Netwalking

This afterschool program offers an investigative approach to teaching heart healthy habits and environmental awareness. Students become "intelligence agents." By listening to audio stories and studying excerpts from 'Walking Journal' entries, students learn to

- decode the language of Nature,
- solve puzzling clues, and
- interpret a variety of secret messages.

Playing games and working in teams, students will build their intelligence in a variety of topics:

- natural science,
- human ecology,
- living history,
- financial literacy, and
- applied arts/technology.

The application below helps Netwalking club leaders tailor assignments addressing the strengths, interests, and personality of each participant. Students can keep track of walking, investigative, and social experiences in small pocket notebooks, which will help them in writing personal journal entries and stories.
